

Quality down to the last detail.

Whether especially high degree of hardness, pronounced bending strength, extreme toughness or extra low reactivity is required – we can produce the perfect carbide grade that exactly matches your individual requirements thanks to our own carbide development and production. For lasting optimized machining results – even with demanding tasks such as tapping in steel.

Additionally: We also produce carbide blanks often with a complex geometry as the basis for sophisticated special tools. For example, this includes rods up to a length of 2000 mm or complex blanks with multiple steps as well as rods for multi-fluted tools with up to five spiral coolant ducts.
