

Fineboring tools

Tapered screw adjustment μm -accurate adjustable

Additional advantages:

The large chip flutes in combination with finebores clamping elements which guarantee an excellent chip evacuation. The clamping element has to be released just a little bit in order to change the insert. But the clamping element itself remains securely connected to the holder.

Based on our standard tools we also design and manufacture customer specific solutions for your individual machining requirement.

Please use our special tool inquiry sheet on page 130 for your convenience.
